

CONTENTS

Title	Page. No
Executive Summary	i
Abbreviations	iii
List of Figures	v
List of Tables	viii
Chapter 1 INTRODUCTION	Page. No
1.1 Conventional AGC Scenario	1
1.2 AGC in Deregulated Environment	4
1.3 Choice of Controller for AGC	6
1.3.1 PI Controller	6
1.3.2 Fuzzy Logic Controller	7
1.4 Combined Intelligence Techniques	8
1.5 Objectives of Research	9
1.6 Outline of the Thesis	10
Chapter 2 LITERATURE REVIEW	
2.1 Overview of load frequency control related to conventional AGC	12
2.2 AGC related to Deregulation	13
2.3 AGC related to Fuzzy Control Theory	14
2.4 AGC (Conventional and Deregulated Scenario) related to intelligent Techniques	16
2.5 Widely used Intelligent Techniques	20
Chapter 3 FREQUENCY CONTROL IN AN ISOLATED POWER SYSTEM WITH INTELLIGENT CONTROLLER	
3.1 Modeling of an Isolated Power System	21
3.2 Simulink model of single area AGC	22
3.3 PI Controller for Single area AGC	23
3.4 Design and implementation of a Fuzzy Logic Controller in MATLAB	24
3.5 Comparison of PI and FLC Responses	26

3.6	FLC tuning using Genetic Algorithm	27
3.7	Some vital GA realization issues	28
3.7.1	Selection of chromosome length	28
3.7.2	Declaration of Bounds	29
3.7.3	Design of Fitness function	30
3.7.4	Reasonable randomness in population	30
3.7.5	Prevention of self-mating	30
3.7.6	Elitism	31
3.7.7	GA program termination norm	31
3.8	GA Algorithms and parameter setting	32
3.8.1	Algorithm for chromosome generation and selection	32
3.8.2	Algorithm for crossover	32
3.8.3	Algorithm for mutation	33
3.8.4	Parameters for GA	33
3.9	Running the GA	34
3.9.1	Population report	34
3.9.2	Generation 41: Statistics	38
3.9.3	Few landmarks in the time response statistics	39
3.10	Plots of frequency response under different testing conditions	40
3.10.1	System without disturbance	41
3.10.2	System with parametric disturbance	42
3.10.3	System with load disturbance	44
3.11	Conclusion	46
Chapter 4 AGC OF INTERCONNECTED TWO AREA SYSTEM WITH INTELLIGENT CONTROLLER		
4.1	Modeling of a two area thermal system (Non- reheat) using integral controller	48
4.2	Design criterion for GA optimized PI controller	49
4.2.1	GA parameters	49
4.2.2	Declaration of bounds	50
4.2.3	Choice of fitness function	50

4.2.4	Simulation result	51
4.2.5	Plots of response of GA PI Controller	52
4.3	Modeling of a two area thermal system (Non- reheat) using Fuzzy Logic controller	54
4.3.1	Design of Fuzzy Logic Controller	55
4.3.2	Membership function of FLC	56
4.4	Optimization of the parameters of FLC using GA	57
4.4.1	Fitness computation	57
4.4.2	Size of chromosome	58
4.4.3	Bounds selection for parameters	58
4.4.4	Parameters for GA	59
4.4.7	Simulation results and discussions	60
4.5	Conclusion	64

Chapter 5 POWER SYSTEMS UNDER DEREGULATION

5.1	Introduction to Restructured AGC	65
5.2	Conventional VS Restructured systems	67
5.3	Concept of Disco participation	67
5.4	Simulink model of a two area AGC after Deregulation	70
5.5	Design of Controller	73
5.6	Design of Fuzzy Logic Controller	73
5.7	Optimal tuning of the gains of FLC using GA	74
5.7.1	Running the GA	76
5.8	System subjected to various testing conditions	78
5.8.1	System with nominal parameters	79
5.8.2	System subjected to parametric disturbances	81
5.8.3	System with dynamically changing Generator Model	84
5.8.4	System with random load disturbance	86
5.9	Conclusion	87

Chapter 6	CONCLUSION AND FUTURE SCOPE	
6.1	Findings with regards to an isolated system	88
6.2	Findings with regards to multi-area AGC System	90
6.3	Findings with regards to AGC system under Restructured scenario	91
6.4	Suggestions and Future Scope	93
	References	95
	Appendix	102
	Curriculum Vitae & Publications	109
