

Name:	 UPES UNIVERSITY WITH A PURPOSE
Enrolment No:	

UNIVERSITY OF PETROLEUM AND ENERGY STUDIES

End Semester Examination, December 2019

Course: Solutions, Phase Equilibrium, Condt., Electro-Chem & Functional Group Organic Chemistry II
Semester: III

Program: BSc. Hons. Elective (Common for BSc. Hons Physics and BSc. Hons Mathematics)

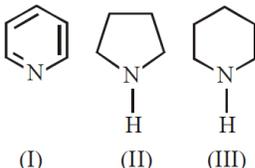

Time 03 hrs.

Course Code: CHEM 1003

Max. Marks: 100

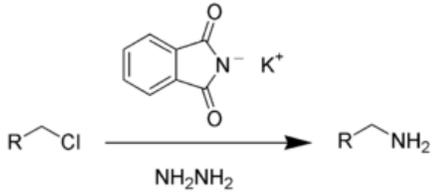

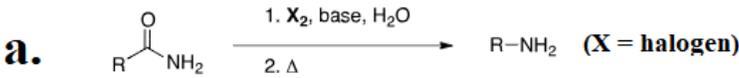

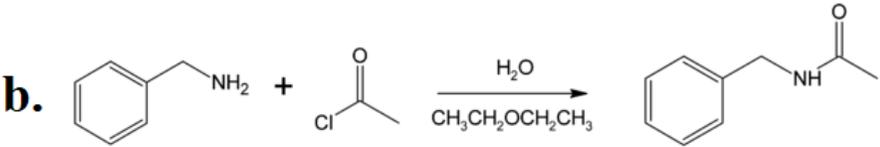

Instructions: Attempt all the questions.

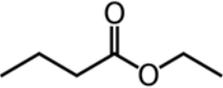

SECTION A

S. No.		Marks	CO
Q 1	Differentiate between anomers and epimers.	4	CO1
Q 2	Arrange the amines given below, based on increasing basicity. Also, explain the reason for this trend. <div style="text-align: center; margin: 10px 0;">  <p style="margin: 0;">(I) (II) (III)</p> </div>	4	CO2
Q 3	What is mutarotation ? Describe in context of glucose.	4	CO2
Q 4	Calculate the single electrode potential for copper metal in contact with 0.10 M Cu^{2+} solution. E^0 for copper is 0.34 volt.	4	CO1
Q 5	Explain the following: (a) Effect of particle size on solubility (b) Effect of rise in temperature on solubility of a substance	4	CO1

SECTION B

Q 6	Arrange the following compounds in increasing order of basic strength: $\text{C}_6\text{H}_5\text{NH}_2$, $\text{C}_6\text{H}_5\text{N}(\text{CH}_3)_2$, $(\text{C}_6\text{H}_5)_2\text{NH}$, CH_3NH_2	8	CO2
-----	---	----------	------------

Q 7	<p>Write a detailed, stepwise mechanism for the reaction given below</p> <div style="text-align: center;">  </div> <p style="text-align: center;">OR</p> <p>Comment on the following:</p> <p>(a) An ionic solid dissolves in water when hydration energy is more than the lattice energy.</p> <p>(b) Insolubility of glucose in benzene</p>	8	CO3
Q 8	Write a short note on Perkin condensation for the synthesis of an α,β -unsaturated aromatic acid.	8	CO3
Q 9	<p>Explain the following terms used in the phase rule study of heterogeneous equilibria: (a) Transition point, (b) Congruent melting point, (c) Eutectic point, (d) Invariant system.</p> <p style="text-align: center;">OR</p> <p>How will you differentiate between the amines by using a Carbylamine test ?</p>	8	CO1
Q 10	Calculate the molar and equivalent conductivities at infinite dilution of the salt KOOCCOONa . Given the molar ionic conductivities at infinite dilution of Ox^{2-} , K^+ , and Na^+ as 148.2, 50.1, and 73.5 $\text{S cm}^2 \text{mol}^{-1}$, respectively.	8	CO3
SECTION-C			
Q 11	<p>(a) Identify the reactions ‘a’ and ‘b’ given in Figure. Write a stepwise mechanism for the formation of products in these reactions.</p> <div style="margin-bottom: 20px;"> <p>a. </p> </div> <div> <p>b. </p> </div> <p style="text-align: center;">Figure</p>	10 + 10	CO1 CO2

	<p>(b) A conductivity cell filled with 0.1 M solution of potassium chloride at 25 °C has a measured resistance of 24.96 Ω. Calculate the cell constant if the conductivity K for 0.1 M solution of KCl is 0.012 S cm⁻¹ and conductivity with water $K = 7.5 \times 10^{-8}$ S cm⁻¹ is used to make up the solutions. When the cell is filled with a 0.01 M solution of acetic acid, the cell resistance is 1982 Ω. Calculate the molar conductivity of acetic acid at this concentration.</p>		
Q 12	<p>(a) Write a detailed mechanism for both the acid and base catalyzed hydrolysis of the ester given below</p> <div style="text-align: center;">  </div> <p>(b) What is a reversible electrode? What type of reversible electrodes are commonly known? Explain with examples.</p> <p style="text-align: center;"><i>Or</i></p> <p>(a) Explain the basic principles of the following by giving suitable examples:</p> <ol style="list-style-type: none"> a. Ninhydrin test b. Fehling's test <p>(b) What are concentration cells? Derive an expression for the EMF of a concentration cell. Calculate the potential developed on a copper electrode at 25 °C when it is dipped in a 0.1 M solution of copper sulphate. The standard electrode potential of Cu/CuSO_{4(s)} system is 0.337 volts at 25 °C.</p>	<p>10 + 10</p>	<p>CO2 CO3</p>
