

Name:			
Enrolment No:			
UNIVERSITY OF PETROLEUM AND ENERGY STUDIES End Semester Examination, May 2022			
Course: Photochemistry and Pericyclic reactions Semester: II Program: M. Sc. Chemistry Course Code: CHEM7021P		Time: 03 hrs. Max. Marks: 100	
Instructions: <ol style="list-style-type: none"> Mention Roll No. at the top of the question paper. Attempt all the questions of Section A and B, and keep the answers in right places. 			
SECTION A (5Qx4M=20Marks)			
S. No.		Marks	CO
Q.1	(a) Calculate the spin multiplicity of triplet and singlet state. (b) What is one Einstein energy?	2 + 2	CO1
Q 2	(a) Discuss the role of quencher in a photophysical reaction. (b) What is delayed fluorescence?	2 + 2	CO1
Q 3	Predict the product/s 	4	CO3
Q 4	Write a short note on photochemical cis-trans isomerization.	4	CO2
Q 5	Write short notes on Aza-Cope rearrangement.	4	CO 3

SECTION B
(4Qx10M= 40 Marks)

Q 1	Explain the plausible consequences when light of suitable wavelength is irradiated on a photoactive molecule.	10	CO1
Q 2	(a) What is meant by photoreduction? Give a suitable example. (b) Write short notes on Hofmann-Löffler-Freytag reaction.	5 + 5	CO2
Q3	(a). Which of the following dienophiles is the most reactive with buta-1,3-diene? (Give proper justification for your answer) <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">i) </div> <div style="text-align: center;">ii) </div> <div style="text-align: center;">iii) </div> <div style="text-align: center;">iv) </div> </div> <div style="display: flex; justify-content: center; margin-top: 10px;">  </div> (b). Which of the following dienes cannot undergo Diels-Alder reactions? (Give proper justification for your answer) <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">i) </div> <div style="text-align: center;">ii) </div> <div style="text-align: center;">iii) </div> <div style="text-align: center;">iv) </div> </div>	5 + 5	CO3
Q 4	Predict the product/s. <div style="text-align: center; margin-top: 20px;">  </div>	10	CO2

SECTION-C
(2Qx20M=40 Marks)

Q 1	(a) Write short notes on i) Conrotatory and disrotatory pericyclic reactions ii) [2 +2] cycloaddition reaction (b) Predict the reaction pathway	10 + 10	CO3
-----	----------------------------------------------------------------------------------------------------------------------------------------------------------	----------------	------------

or

(a) Predict the product/s and the possible reaction pathway

Q 2

(a) Predict the product/s

(b) Give an example of photochemical isomerization via formation of Prismane.

or

Predict the product/s

(a)

10 + 10

CO2

(b)
