

Name:			
Enrolment No:			
<b>UNIVERSITY OF PETROLEUM AND ENERGY STUDIES</b> <b>End Semester Examination, May 2022</b>			
Course: Risk Management in Exploration		Semester: VIII	
Program: B.Tech.GSE		Time : 03 hrs.	
Course Code: HSFS 4017P		Max. Marks: 100	
<b>Instructions:</b>			
<b>SECTION A</b> <b>(5Qx4M=20Marks)</b>			
S. No.		Marks	CO
Q 1	List <b>five</b> factors that impact the economics of oil and gas projects.	[4]	CO1
Q.2	Define NCF and Abandonment Cost	[2×2]	CO2
Q.3	Write the full form of :  RCA, EIA , HAZOP, HAZID	[4]	CO5
Q.4	Explain the term salvage value with suitable example.	[4]	CO3
Q.5	Define decision tree. Also outline its application in petroleum exploration.	[2+2]	CO4
<b>SECTION B</b> <b>(4Qx10M= 40 Marks)</b>			
Q.6	(a) Describe geological risks encountered in oil and gas industry. Also outline how to mitigate these risks.  <b>OR,</b>  (b) Define Sensitivity analysis. How do you perform sensitivity analysis for oil and gas exploration?	[10]	CO5
Q.7	Describe the Service Contract legal system that has been developed to address the rights and obligations of host Govt. and of private investors in oil and gas industry.	[10]	CO6

Q.8	An oil and gas company purchased a compressor for ₹ 50,000 on 2 <sup>nd</sup> of March. It has an estimated useful life of 5 years and residual value of ₹2000. If the rate of depreciation is considered as 20% , how will you compute decline balance depreciation for the machinery?	[10]	CO3
Q.9	<p>If the probability of a successful well is 0.9 and you have two alternatives which are:</p> <p>(i) Farm out : Producer’s return is worth \$75,000 , a dry hole causes no profit or loss.</p> <p>(ii) Drilling the well: A dry hole costs \$300,000 and a hit brings \$ 800,000 (after all costs).</p> <p>You need to take a decision for your company whether it should go for farming out or go for drilling option by evaluating your options on the basis of decision tree analysis.</p>	[10]	CO4

**SECTION-C**  
**(2Qx20M=40 Marks)**

Q.10	<p>Compute the Payback Period for the given cash flows of the four projects, E, F, G, and H, and take a decision on which projects do you accept and reject with a three year cut-off period for recapturing the initial cash outflow?</p> <table border="1" data-bbox="228 1167 1227 1797"> <thead> <tr> <th>Projects</th> <th>E</th> <th>F</th> <th>G</th> <th>H</th> </tr> </thead> <tbody> <tr> <td>Cost</td> <td>\$40,000</td> <td>\$250,000</td> <td>\$75,000</td> <td>\$100,000</td> </tr> <tr> <td>Cash Flow Year One</td> <td>\$10,000</td> <td>\$40,000</td> <td>\$20,000</td> <td>\$30,000</td> </tr> <tr> <td>Cash Flow Year Two</td> <td>\$10,000</td> <td>\$120,000</td> <td>\$35,000</td> <td>\$30,000</td> </tr> <tr> <td>Cash Flow Year Three</td> <td>\$10,000</td> <td>\$200,000</td> <td>\$40,000</td> <td>\$30,000</td> </tr> <tr> <td>Cash Flow Year Four</td> <td>\$10,000</td> <td>\$200,000</td> <td>\$40,000</td> <td>\$20,000</td> </tr> <tr> <td>Cash Flow Year Five</td> <td>\$10,000</td> <td>\$200,000</td> <td>\$35,000</td> <td>\$10,000</td> </tr> <tr> <td>Cash Flow Year Six</td> <td>\$10,000</td> <td>\$200,000</td> <td>\$20,000</td> <td>\$0</td> </tr> </tbody> </table>	Projects	E	F	G	H	Cost	\$40,000	\$250,000	\$75,000	\$100,000	Cash Flow Year One	\$10,000	\$40,000	\$20,000	\$30,000	Cash Flow Year Two	\$10,000	\$120,000	\$35,000	\$30,000	Cash Flow Year Three	\$10,000	\$200,000	\$40,000	\$30,000	Cash Flow Year Four	\$10,000	\$200,000	\$40,000	\$20,000	Cash Flow Year Five	\$10,000	\$200,000	\$35,000	\$10,000	Cash Flow Year Six	\$10,000	\$200,000	\$20,000	\$0	[20]	CO4
Projects	E	F	G	H																																							
Cost	\$40,000	\$250,000	\$75,000	\$100,000																																							
Cash Flow Year One	\$10,000	\$40,000	\$20,000	\$30,000																																							
Cash Flow Year Two	\$10,000	\$120,000	\$35,000	\$30,000																																							
Cash Flow Year Three	\$10,000	\$200,000	\$40,000	\$30,000																																							
Cash Flow Year Four	\$10,000	\$200,000	\$40,000	\$20,000																																							
Cash Flow Year Five	\$10,000	\$200,000	\$35,000	\$10,000																																							
Cash Flow Year Six	\$10,000	\$200,000	\$20,000	\$0																																							

	<b>OR,</b>		
	Find the IRR of an investment having initial cash outflow of \$250,000. The cash inflows during the first, second, third and fourth years are expected to be \$55,200, \$90,000, \$75,100 and \$50,400 respectively. Assume that the rate of interest as 20%.		
Q.11	<p>Calculate the project's net cash flow of the project. The details of the project in any particular year are given as below:</p> <p>Production = 20MMbbl ; Oil Price = \$ 100/bbl; Royalty Rate = 10%;</p> <p>Tax Rate = 50% ; CAPEX = \$200 Million, OPEX = \$20 Million (Assume that previous CAPEX was \$100 million with 20% straight line capital allowance).</p> <p>Estimate the net Cash flow for just 1 year of the project.</p>	[20]	CO2
